3D MODELING

"In the near-future, we will have the genetic tools that will allow us to create completely new species."

"Just imagine what we will do with that God-like power..."

**STEP 1
IMAGINATION
& DESIGN**

The creature was designed by an artist using a computer with 3D modeling software.

A layer of powder is flattened with a roller. Then a thin slice of the 3D model is sprayed on to the powder with glue.

This process is repeated layer on top of layer until the object is completed.

**STEP 2
3 DIMENSIONAL
PRINTING**

An ink-jet printer that uses powder and liquid glue to output the 3D model in pieces.

To learn more about the artist and the process visit MAXSUMAE.com

To learn more about the 3D printing & prototyping technology visit ZP24.com

**STEP 3
PROTOTYPE
EXTRACTION**

The powder with no glue is brushed away. The remaining parts were glued together for the final sculpture.

Heineken - Stella Artois - Newcastle - Pacifico Guinness - Kona: Fire Rock - Kona: Long Board Sierra Nevada - Corona - Amstel Light - Hinano

Domestic Beer - 4

Budweiser - Bud Light - Coors Light O'Douls (non-alcoholic)

CUSTOM STONES

Cantera Stones™ are architectural stones, handmade with natural materials that model the color and texture of real stones.

Our mixes are designed for decorating interior exterior walls, retaining walls, walkways, fireplaces, columns, ceilings, benches, doors, windows and more.

Cantera's authentic color captures the essence of any natural stone, from river rock to stacked stone to antique brick.

THICKER COLOR

Cantera Stones feature ColorThru Stone™ construction that protects both the visual appeal and extends the life of your investment.

Our stones have a thick colored front surface that preserves the appearance of real stone, even if accidentally chipped.

The color-protected face rubs away during installation, providing cost savings throughout the project.

ANY COLOR

Cantera Stones are made to order so their color can be customized to match the color scheme of any project.

Mixes in shades of red or tan? Cantera can create stones to match, providing a perfect harmony of color and texture for any room.

To simulate the look of natural stone, various coloring techniques are used, some of which include Cantera's ColorThru Stone™ feature.

LIGHT WEIGHT

Cantera Stones weigh a fraction of a typical "full thickness stone" and can be installed on to existing wall surfaces.

Our stones are a true lightweight decorative veneer. They are installed one by one with concrete grout and do not require additional fasteners.

Finished stones are available in various sizes up to 24" wide x 12" high x 4" thick and weigh about 7 pounds per square foot.

ANY STYLE

Cantera Stones can be patterned from any style of natural stone. Master stonemasons hand-carve walls to create authentic stone relief.

With our custom stone you can make a mark to create an artistic design possibilities in landscaping, fire, the exterior and interior of your stone.

Unique to Cantera, we offer mortared stones in both natural and concrete styles that can be used for fountains, outdoor walls and art pieces.

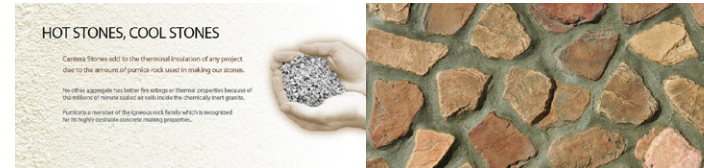

HOT STONES, COOL STONES

Cantera Stones add to the thermal insulation of any project due to the amount of perlite rock used in making our stones.

The white aggregate has better fire ratings or thermal properties because of the insulation or mineral substrate used in the concrete front grout.

Purperlite is a member of the green rock family which is recognized for its highly cohesive concrete masonry properties.

NATURAL QUALITY

Cantera Stones' highly detailed realistic look comes from using natural ingredients that are environmentally safe.

Each stone is handmade using quality materials to ensure your project will stand the test of time and continue to add value to your project.

Our stones, like real stone, weather throughout their life span, providing a natural aged look.

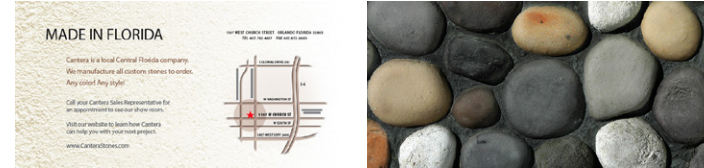

MADE IN FLORIDA

Cantera is a local Central Florida company. We manufacture all custom stones to order. Any color. Any style!

Call your Cantera Sales Representative for an appointment to view our stone walls.

Visit our website to learn how Cantera can help you with your next project.

www.CanteraStones.com

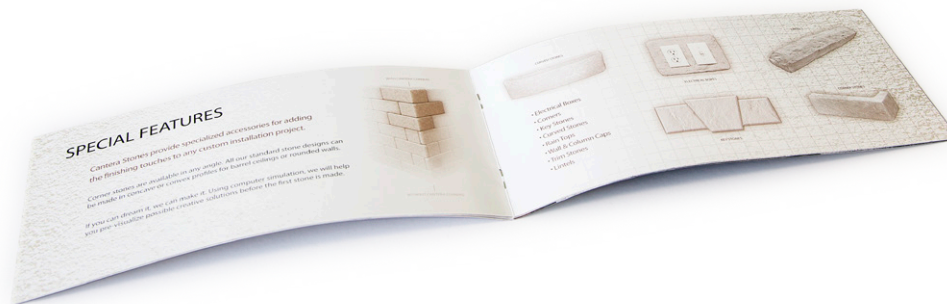

SPECIAL FEATURES

Cantera's Stones provide specialized accessories for adding the finishing touches to any custom stone veneer on concrete or masonry projects. Our standard stone options can be made in concrete or masonry. For better color and texture, we will help you choose the best stone for your project.

Call your Cantera Sales Representative for more information on our special features.

Cantera™

CUSTOM STONES
ANY COLOR. ANY STYLE.

Cantera Stones are handmade architectural stones that model the color and texture of real stones. Cantera stones can be installed over virtually any structurally sound surface.

Cantera Stones weigh a fraction of a typical "full thickness stone" and can be installed on to existing wall surfaces.

Our stones are a non-loadbearing decorative veneer. They are installed one by one with concrete grout and do not require additional fasteners.

Finished stones are available in various sizes up to 24" WIDE X 12" HIGH X 4" THICK and only weight about 7 pounds per square foot.

ONLY 7 POUNDS PER SQ. FT.

Cantera Stones provide specialized accessories for adding the finishing touches to any custom installation project.

Corner stones are available in any angle. All our standard stone designs can be made in concave or convex profiles for barrel ceilings or rounded walls.

CORNERS

CURVED STONES

ELECTRICAL BOXES

Cantera Stones feature ColorThru-Stone™ construction that protects both the visual appeal and extends the life of your investment.

Our stones have a thick-colored front surface that preserves the appearance of real stones, even if accidentally chipped. This dense-colored layer reduces waste during installation providing cost savings throughout the project.

THE TALENT

Tampa, FL
SUMMER MONROE
as **JILL**
Summer is a gorgeous native of the sunshine state, there for Summer always brings the Heat with her!

As a model Summer has worked on a variety of different projects including: Editorial, Fashion, Fitness, Glamour, Lifestyle, Lingerie, Pinup, Swimsuit Catalog and calendars and as an actress she has done parts in commercials and full length movies.

She been modeling and acting for five years now and has been fortunate enough to make a career out of it.

Summer is also a serious athlete and has been competing in Triathlon Events on the weekends. So you can find her training and running on the beach, sometime with her sweet bichon Odie. Just to keep the energy going she may just rock out at a local metal show.

Summer delivers that sugar and spice to the role of Jill making the character sizzle with attitude.

THE STORY

Nick enters the underground world of drugs, prostitution & human trafficking to find his missing sister Genie.

Joined by his best friend Bobby and a gang of school mates, they investigate the disappearance of Genie's friend Amy, who was killed just before Genie disappeared.

The trail leads to crime boss Mr. Norco and his psychopathic son Carmine, who gets sexual pleasure by murdering girls he has enslaved.

Nick and his gang must make indecorous choices as they struggle to survive in the decrepit world of strip clubs, porn industry, gambling, and crack houses and continue their efforts to rescue Genie.

To save Genie, Nick goes to war against the crime family controlling the city. Nick's gang grows with street locals and enslaved girls that.

The final confrontation at the crime complex, escalates into a bloody shootout to the end.

Nick and the gang rescue Genie and eliminate the head of the crime family, only to have his demented son Carmine slip through their fingers and make his escape.

CHALLENGE >

Army training and simulation demands the capability for dismounted soldiers to train in small units with both virtual and live scenarios. This capability needs to be available to the soldier in garrison, on the training range as well as in operational deployments.

SOLUTION >

MR MOUT demonstrates how simulation software and associated technologies, including the use of mixed (live-virtual-constructive) reality concepts, can be "fully embedded" into the operational Future Force Warrior (FFW) system. MR MOUT Engine is an integration of Graphics Engine, Audio Engine, and Special Effects Engine all being driven by an interactive, non-linear Scenario Engine. In the future, as technology readiness levels (TRL) increase, these simulation capabilities will permit small units to conduct training, mission preparation, and mission rehearsal; on-demand, anytime and anywhere.

WARFIGHTER'S BENEFITS >

Multi-functional Capability: Training, Mission Prep and Mission Rehearsal can be made part of operational weapon systems.

© 2004 UCF/MCL

Army Science & Technology Objective (STO #NSP2002.04)
Embedded Training for Dismounted Soldiers (ETDS)

User HUD Design with Forward Observer Data and Navigational Aids

simulates capabilities of the Future Force Warrior with advanced integration of situational awareness augmentation.

HOW IT WORKS

MIXED REALITY SYSTEM

- A - 3D Computer Generated Imagery
- B - Physical Environment
- C - Captured Video
- D - Real and CG Special Effects
- E - 3D Audio

MR MOUT >
In order to support ETDS efforts, the U.S. Army Research, Development and Engineering Command (RDECOM) established the Constructed Simulation Technology (CST) Enterprise. The Mixed Reality in Military Operations in Urban Terrain (MR MOUT) test bed specifically addresses most early concepts from the art and science of simulation technology and is a critical element of the CST enterprise.

MIXED REALITY >
The advancement in the Art and Science of Mixed Reality is being pioneered at the Media Convergence Laboratory in conjunction with the School of Computer Science, the Institute for Simulation and Training, and the College of Arts and Science working with research in Interactive Story, computer vision, user of interface, and emotional interaction. For more information on Mixed Reality and the Media Convergence Lab visit www.mcl.ucf.edu.

LAPAROSCOPIC BI-POLAR DEVICE

GENICON
NEW IDEAS FOR MODERN HEALTH CARE

GENICON
NEW IDEAS FOR MODERN HEALTH CARE

Laparoscopic Bi-Polar Device

Precision, stability and security are the decisive criteria for bi-polar instrumentation used in laparoscopic surgery.

Ergonomic – conceived to reduce fatigue for surgeons who perform extended and difficult surgeries. A strategically positioned rotating switch permits single hand operation for optimal control.

Versatile – modular design easily assembles with an array of four styles of forceps in either 30cm or 45cm working lengths. Each forcep is designed for precise application of energy and release of tissue without extra effort.

Durable – Modern materials harmonized with state-of-the-art engineering provide easy assembly and probe sturdiness. Easily cleaned and re-sterilized for multiple uses within the most active Operating Room for the most demanding surgeons.

Who Uses Spot Portable Vision Screeners

Spot portable vision screeners can help expand the impact of organizations committed to childhood health & learning in the following areas:

- Healthcare Providers
- Head Start Programs
- Sports Venues
- Charities

Vision Health for Head Start and Early Childhood Intervention

Spot helps Head Start programs bridge the educational gap, enabling you to do more with less.

Experts estimate that 80% of what is learned is visually acquired.

With limited access to proper healthcare, it's no wonder children in underprivileged areas fall behind early on; this is why vision health has and continues to be an important component of most Head Start and early intervention programs.

Traditional vision screening is time-intensive, subjective in nature and especially challenging with younger children.

With Spot vision screeners, it's as easy to screen a six-month old as it is to screen an adult. Spot requires little to no cooperation from the subject, taking what was once a cumbersome and time-intensive process and reducing it to mere seconds.

The burden of Head Start programs has never been greater.

With increasing pressure to demonstrate results, programs are expected to do more with fewer resources. Spot is helping Head Start programs across the country ensure that children don't fall behind. With all the obstacles disadvantaged children face, vision health doesn't have to be one of them.

Spot is an award-winning, handheld vision screener that dramatically improves the efficiency of vision screening.

Spot detects the potential presence of the most disabling vision health issues, providing clear and objective results. Because of its easy operation, more children can be screened and, in conjunction with adequate follow-up care, more vision problems can be resolved.

Its portability makes it easy for Spot to go where you go with a battery that powers an entire day of screening. Vision screening made easy and that makes a difference!

The Best 30 Minutes Of The Day!

Right In the classroom!

ADVENTURE TO FITNESS

Welcome to Adventure to Fitness!
The most popular K-5 interactive, on-demand Physical Education activity available in schools.
It's simply "The Best 30 Minutes of the Day!"

Age appropriate co-curricular episodes stream into classrooms immersing students in an exciting world of adventure. Students interact in moderate to vigorous activity accomplishing each week's 30 minute exhilarating mission while helping schools satisfy State physical education mandates. Designed for the general education classroom each episode aligns to Next Generation Sunshine State Standards in core subjects; giving teachers the time and freedom to participate.

“
This was amazing!
As a teacher, I saw first-hand the positive effects the adventures had on the students. As a parent, it was exciting to hear my own children share what they learned each day on eating healthy, the importance of exercising and of course, their favorite part, the Adventure!
”
